SUMMARY

Spatial analyst with a technical foundation in GIS, scripting, and data integration. Currently completing a BA in Geography (GIS) at Sacramento State while gaining hands-on experience in 3D campus modeling and cartographic production. Background in IT automation adds a practical edge in data workflows and problem-solving.

EDUCATION

BA, Geography (GIS) — *Sacramento State University* Expected Fall 2026

AS, Social and Behavioral Sciences • AA, Geography Sierra College, Rocklin

EXPERIENCE

Geospatial Lab Assistant | *CSUS Sacramento* Oct 2025 – Present

- Created evacuation maps for campus buildings by processing and cleaning AutoCAD floor plan data in Adobe Illustrator, producing print-ready cartographic deliverables.
- Built an ArcGIS Indoors 3D campus model from scratch, including AutoCAD data integration, schema cleanup, and geodatabase population — enabling indoor navigation and facility management use cases.

IT Support Specialist – Intermediate | *Blue Shield of California* Apr 2023 – Jul 2025

- Reduced average ticket resolution time by 20% through efficient triage and prioritization strategies.
- Automated mailbox and distribution list provisioning using PowerShell, transitioning requests from manual to fully automated workflows.
- Supported organizational IT health across cloud platforms (Azure, Citrix, VMware) while aligning work to Blue Shield's mission of quality healthcare delivery.

IT Support Specialist | *TEKSystems* Nov 2021 – Apr 2023

- Developed a knowledge base article series that reduced repeat call volumes by 15%.
- Improved user account accuracy and security through meticulous IAM processes and regular audits.
- Managed broad IT responsibilities including direct user support, account management, and issue resolution across Windows 10 environments.

PROJECTS

McClellan Business Park - Path Dependence Study

Independent spatial research comparing Cold War-era military infrastructure to current civilian land use at McClellan Business Park. Methods included historical aerial photo georeferencing, manual digitizing, file geodatabase schema development in ArcGIS Pro, and multi-source spatial data integration. Presented results at California Geographical Society.

GIS Team Lead, Frank Arnott NGEA Mineral Exploration Competition

Led a student team in building a statewide environmental suitability model for Nevada. It scores 11,341 ten-square-mile hexagonal cells and classifies each into one of four risk zones to screen where mineral exploration faces the fewest environmental constraints. Integrated hydrology (USGS NHD), groundwater risk (Nevada Division of Water Resources basin indicators), and biodiversity data from 40+ threatened and endangered species, habitat, and migration corridor layers. Each layer was reclassified to a common 1-5 scale and combined in a weighted composite. Wrote ArcPy scripts to automate the data joins, reclassification, and species weighting, using ESA listing status and range restriction as weighting criteria. Presented the results at the Society of Economic Geologists conference.

SKILLS & TECHNOLOGIES

GIS & Spatial: ArcGIS Pro, ArcGIS Online, QGIS, ArcGIS Indoors, AutoCAD, Adobe Illustrator, Cartography, Spatial Analysis, Geodatabase Design, Georeferencing

Programming & Scripting: Python, PowerShell, SQL

IT & Cloud: Azure, Active Directory, ServiceNow, Citrix, VMware, Windows 10, Cloud Computing, Virtual Networks, File Permissions, IAM
